ANJANA KUMARI SINGH

LinkedIn   Github   Gmail   Mobile: +91-7991191846

Education

- Bachelor of Technology ,Dr A.P.J Abdul kalam Techical University
  Noida Institute of Engineering and Technology   Gr.Noida,India
  Computer Science and Engineering, CGPA-8.74-Till last sem
  Courses: operating system,Data Structure, Analaysis of Algorithm ,machine learning ,Database,web developer.

Technical Skills

- Languages: Python(good), C++(Good), SQL(Good),Javascript(good),Advance Java
- Frameworks: php(beginner),react.js (good) ,learning Node.js(beginner)
- Tools: Github(good),git
- Soft   Skills: Leadership, Event Management, Writing, Time Management

Achievement

Completed Microsoft AI odyssey challenge Level-1

- Level-1 - Microsoft AI skills Challenge

Completed Microsoft AI odyssey challenge Level-2

- Level-1-Build a natural Language Processing solution with Azure AI Language
- Level- 2-Build an Azure AI vision
- Level-3-Create an intelligent document processing solution Azure AI Document
  Intelligence
- Qualified for Google Girl Hackathon 2024 [Level-1]
- Solved 100+ Question on coding plateform like Leetcode
- Achieved 3 star on hackerrank in python & 2 star in c++ language.

Experience

- Hacktoberfest'23   October
  2023   I contributed in the Hacktoberfest organized every year in month of October, it is open source event where I
  contributed to   different developer project, raised issues done pull requests.
- Participated in Girlscripts summer of   code 2024
- Participated in SIH internal Hackathon 2023
  Developed a smart parking system using sensors and computer vision for detection of parking slots and
  Object detection for detecting cars and aligning them into their slots.

Projects

- .Handwritten Digit Detection : Build a project (Try it) that aim's is to classifies or identify the handwritten digit into their
   respective digits with help of machine learning and computer Vision.

- Rock paper scissor game: Build a project that plays a game (Try it) "Introducing my interactive game! Built with HTML , CSS and
  JavaScript , Experience with user-friendly interface" .This is the game which can be played online with no pen or paper involved.

- .Credit card Fraud Detection system: This is used for the detection of fraud transaction among the
   Normal   transaction (Try it) using the Logistic Regression .This is model which can be used for detection.
